

INTRODUCING AGITA

- The first truly new adult fly control product in decades.
- Works where other products have failed.
- Will have a positive impact on your farm's bottom line.
- Reduces animal stress and the spread of disease.

WATER SOLUBLE

AGITA granules are dissolved in water and then sprayed or painted on.

ATTRACT AND KILL

- Sugar based and very attractive to flies.
- Muscamone®, a fly attractant, simulates pheromones that signal flies to congregate
- Active ingredient (thiamethoxam) kills flies shortly after ingesting.

The Novartis Product Profile

The breakthrough new "Attract and Kill" adulticide. Available in two formulations, water-soluble and scatterbait. It is the first innovation in the fly control market in years and is known as the resistance breaker.

Snip®

A brightly colored granular scatterbait form of the powerful adulticide, azamethiphos. **SNIP** is spread wherever flies are a problem. **SNIP** is also effective against certain species of cockroaches and ants.

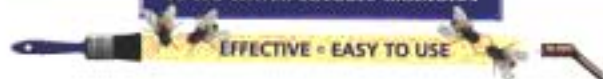

Neporex®

A powerful larvicide that is applied directly onto manure or wherever fly eggs are laid. **NEPOREX** contains cyromazine and kills fly larvae, making sure they never become adult flies.

Application and dosage

Agita	Application	Dose rate	Dung area
10WG	Paint-On	400gm/320 cc water	400m ²

Anti-Fly Program
AGITA®
 10 WG WATER-SOLUBLE GRANULES

Chemical and physical properties

<i>Trademarks</i>	AGITA® 10 WG.
<i>Formulation</i>	Water dispersible granules (WG) for application after dissolving in water by conventional paint equipment.
<i>Composition</i>	100 g/kg thiamethoxam.
<i>Appearance</i>	Tan to beige granules.
<i>Broth</i>	Milky beige suspension.
<i>Shelf life</i>	3 years when stored under ambient storage conditions.

AGITA 10 WG is a water soluble formulation.

- Sugar based formulation and very attractive to flies.
- Tricosene, a fly attractant, simulates pheromones that signal flies to congregate.
- Diluted in water and painted on walls, window sills, posts, sunny/warm areas and fly resting areas.
- To avoid staining, AGITA 10 WG can be applied to cardboard or wood and hung in high-congregation areas.
- Very effective control after ingesting.

Facts sheet

- A revolutionary new adulticide that provides long-term, residual control of flies.
- Easy to use.
- Diluted with water and painted onto fly resting places such as window sills, walls, posts or along doors.
- Designed for use in all animal and livestock operations.
- Available at farm co-operatives and farm shops in 100 g, 250 g, 400 g and 1 kg jars.
- A favourable safety profile.
- It is safe for beneficial insects if applied as recommended.
- An "attract and kill" strategy. Flies are attracted to the bait, eliminating the unnecessary exposure of animals, humans and the environment to broadcast spraying or fogging.
- A dust-free, granulated formulation.

Selling arguments

- Easy applicable formulation.
- Dust free.
- Rapidly dissolving and re-dispersion.
- Good worker safety profile.
- Packaging can easily be emptied.
- Exclusive Novartis AH technology!
- Targeted spot application.
