

# MOSQUITO CONTROL

***Aquatain AMF***

**LIQUID  
MOSQUITO FILM**

- **Instant coverage**
- **Remains effective for at least 4 weeks**
- **Easy to apply**

**NSF**<sup>®</sup>

Certified to  
NSF/ANSI  
Standard 60

# **Aquatain AMF**

## **LIQUID MOSQUITO FILM**

### **What is Aquatain AMF?**

Aquatain AMF is a unique silicone based liquid for mosquito control. It is not a toxic chemical – it works by forming a very thin film on the water's surface and destroying the aquatic stages of the mosquito lifecycle.

### **How does Aquatain AMF work?**

Aquatain AMF affects the mosquito breeding cycle at all levels. Trials have been undertaken by independent organisations around the world, and they show a consistent pattern:

- the pupae of all mosquito species are destroyed within a couple of hours
- the larvae of all mosquito species are also destroyed, but the time frame varies between species
- females are deterred from laying eggs on treated water or drown when attempting to lay their eggs

### **How long does Aquatain AMF remain effective?**

The Aquatain AMF film has some unique features which make it very a long lasting and effective product for mosquito control:

- it will spread around vegetation to completely cover the water surface (forming a continuous barrier against mosquitoes)
- it is resistant to ultra violet degradation
- it will remain effective for at least 4 weeks

### **Is Aquatain AMF safe?**

Yes it is! Silicones are used in a wide variety of applications including water repellent sealers, hair conditioners and cosmetics. In fact Aquatain AMF is certified by NSF International for application to drinking water storages in the United States of America.

### **How do I apply Aquatain AMF?**

For small bodies of standing water such as blocked gutters and drains, ponds, water tanks, septic tanks and old tyres, simply apply 0.5-1.0mL per m<sup>2</sup>. A few drops is all that is needed on smaller areas such as pot plant saucers. Repeat application every 4 weeks.
